1 inch

scale check

### Before drilling!

Verify that this document is printed at the intended scale. The square at left should measure *exactly* one inch by one inch; holes on this paper should align with your Dan Hold™

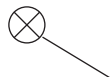

3/16" clearance

### Care, cleaning and application note:

This KYDEX material is more resistant to a wider range of concentrated chemicals than any other thermoplastic. It offers a broad range of resistance to cleaning solutions and is UV resistant so you should not experience any problems. Always test any cleaning product first on a small area to insure there are no problems.

When drilling additional mounting or attachment holes, it is wise to keep 3/8" or more between the outside circumference of the hole and the edge of the KYDEX material. Avoid significant point loads. The Dan Hold™ should never be used as a stepping device.
